

ENVIRONMENTAL and ENERGY POLICY

We shall minimize the environmental impact and have high requirements on energy performance in our material handling operations, our products and our services.

We achieve this by:

From a life cycle perspective and in collaboration with our suppliers developing environmentally and energy-adapted products and processes.

Using energy efficient manufacturing and logistic processes that have minimal environmental impact and reduce climate change.

Management and employees have the right conditions and involvement to be able to act responsibly on environmental and energy issues.

Making decisions based on facts.

Continuously improving our products and processes.

We comply with or exceed requirements such as those made by authorities, our customers and stakeholders.

Kristian Björkman VD, Toyota Material Handling
Manufacturing Sweden AB, Mjölby April 2021
